

# Delivery Management

## Go According to Plan

Arrange site deliveries to be booked into an available slot and prevent local congestion. This means a safer environment with minimal disruptions to labour.

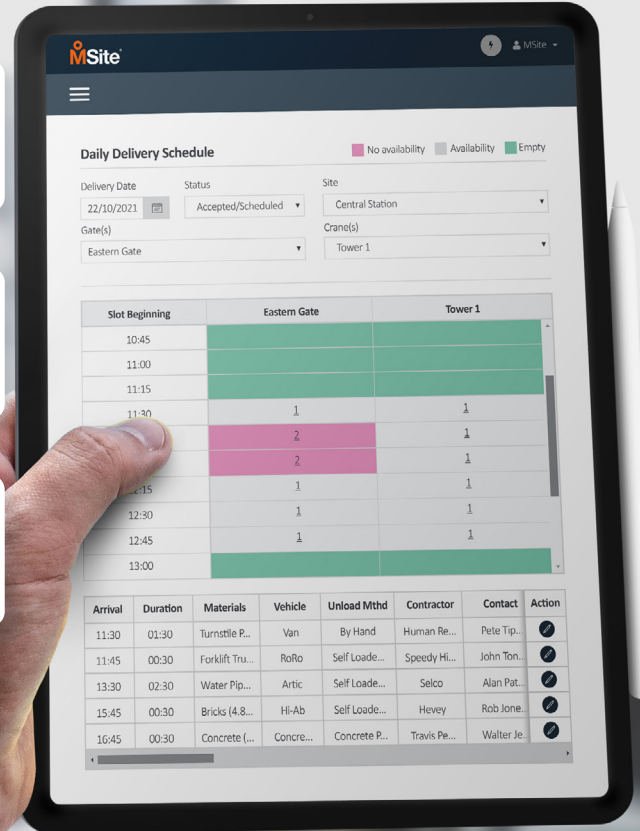

## Digital Records

Digitalise all your delivery data to evidence planning, auditing and proof of delivery.

## Carbon Emission Reporting

Records the distance the delivery vehicle is covering and therefore contributing to your site's carbon footprint - run reports at the click of a button.

[Learn More >](#)

Msite Delivery Management is a full site delivery scheduling tool supporting Site Managers in organising deliveries to site. Our Delivery Management tool enables suppliers to pre-book delivery slots online, prior to their arrival on site and can report on CO2 emissions.

## Gate & Crane Management

To assist with offloading, suppliers can request specific gate access and crane hook time.

## Industry Compliant

Full delivery slots meet FORS compliance, submission of adequate lift plans and RAMS.

## Automated Email Notification

Email notifications are automatically generated when a supplier submits a booking request or when a booking status is accepted or rejected.

## Tablet or Mobile

The site team can use a mobile or tablet to record the arrival of a delivery, and it's quick and easy to do.
