

MSite Face Mini

Use it your way flexibly

Face Mini can be used with a desktop stand or wall mounted.

Hassle-free set up

Built-in Wifi and 4G connectivity. Move from site to site freely, with no MSite Engineer visit needed.

Simple sign up

It's quick and easy to create and transfer workers' biometric profiles for your Face Mini.

[Learn More >](#)

MSite Face Mini is a flexible facial recognition unit for registering workers on site to track time and attendance. Face Mini uses commercial off-the-shelf hardware that is designed to be mobile, so can be easily moved to different project locations.

Quick Capture

Less than 0.5 seconds to scan facial features for fast entry and exit.

Offline Use

Face Mini can work offline and syncs with the wider system when reconnected to the internet.*

Anti-Spoofing

3D camera technology ensures that photos can't be recognised by the face reader, preventing fraud.

Fatigue Management

Allows workers to enter their travel information at the start and end of their day.**

* Face Mini needs to access the internet once every 24 hours to sync.

** Additional Fatigue Management module required.
